

DIN Rail DALI Universal Control Module

Artikelnummer 0041612

SYLVANIA

The Digital Addressable Lighting Interface (DALI) Ballast Module is an ultra-compact DIN rail mounted unit with connections for a DALI Universe, configurable inputs/outputs and an M-BUS network. Using DALI, you can connect up to 64 luminaires through a single power and data connection whilst retaining individual control. This is complimented with four additional channels of configurable I/O. The DALI Ballast Module can be used in standalone mode where it can be set-up directly via the on-board keypad and display driven menu system and the intelligent DALI setup assistant without the need for a PC. As part of a wider networked solution, DALI Ballast Modules can be configured to operate as part of an EcoControls fully addressable lighting management system.
